MP3 Analysis Report
Julian Tiu

1. README

All compilation is done by the makefile. To compile, first type make in the command line and press enter. Type make clean and press enter to remove all fifo files. Finally, type ./client –w # -n # in the command line and press enter to run, where –w is the flag to determine the amount of worker threads and –n is the flag that determines the number of times each request thread will send to the buffer.

2. Report

The performance was unable to be tested fully. All tests were done in the user's local machine, and some commands are illegal in the operating system. As a result, the program does not function properly most of the time.
